CHANNEL 10

BREAKING
NEWS

URGENT

BREAKING NEWS

Another embarrassing data breach. Personal data all over the Internet.

- No clue how this happened: CIO • It was a ticking time bomb all this time: DBA •

'-- the evergreen vulnerability

And although declining in recent years, it just won't go away.

- 6.7% of all vulnerabilities in open-source.
- 10% of all vulnerabilities in closed-source.

(2024)

'-- in the news

You may have heard about some of these fine companies?

- Sony Playstation Network
- Equifax
- Yahoo
- Epic Games / Fortnite
- SQL Server Reporting Services
- 7-Eleven
- Sony Pictures
- Marriott International
- TSA

The good news is, it's relatively easy to fix.

learning objectives

- What is a SQL injection
- What are the risks
- What to look for
- How to fix your code

so who am I?

I talked to some sponsors in the break

Be honest

I am being honest

What did you talk about?

The gave me some cool swag

Thank you.

so, who's paying for all this?

3	Staging.Contracts	dbo.Contracts	2	Updated

```
sql
SELECT TOP (1) @sql='
    INSERT INTO '+Dest_object+
    ' SELECT * FROM '+Source_object+
    ' WHERE '+TimestampColumn+ '>' +
    ' (SELECT MAX('+TimestampColumn+') FROM '+Dest_object+');'
FROM Metadata.ETL_flows;
```

```
EXEC(@sql);
```

```
sql
INSERT INTO dbo.Currencies
SELECT * FROM Staging.Currencies
WHERE Updated>(SELECT MAX(Updated) FROM dbo.Currencies);
```

dynamic sql

ETL frameworks can be vulnerable, too.

ID	Source_object	Dest_object	Dependency	TimestampColumn
1	Staging.Currencies	dbo.Currencies	NULL	1=0; DROP TABLE dbo.AuditLog; UPDATE Metadata.ETL_flows SET TimestampColumn='Updated'--
2	Staging.CurrencyRates	dbo.Fx_Rates	1	Updated
3	Staging.Contracts	dbo.Contracts	2	Updated

sql

```
INSERT INTO dbo.Currencies
SELECT * FROM Staging.Currencies
WHERE 1=0; DROP TABLE dbo.AuditLog; UPDATE Metadata.ETL_flows SET
TimestampColumn='Updated'-->(SELECT MAX(1=0; DROP TABLE
dbo.AuditLog; UPDATE Metadata.ETL_flows SET
TimestampColumn='Updated'--
) FROM dbo.Currencies);
```

dynamic sql

ETL frameworks can be vulnerable, too.

ID	Source_object	Dest_object	Dependency	TimestampColumn
1	Staging.Currencies	dbo.Currencies	NULL	1=0; DROP TABLE dbo.AuditLog; UPDATE Metadata.ETL_flows SET TimestampColumn='Updated'--
2	Staging.CurrencyRates	dbo.Fx_Rates	1	Updated
3	Staging.Contracts	dbo.Contracts	2	Updated

1. finish the INSERT:

```
INSERT INTO dbo.Currencies
SELECT * FROM Staging.Currencies
WHERE 1=0;

DROP TABLE dbo.AuditLog;

UPDATE Metadata.ETL_flows SET TimestampColumn='Updated'-->(SELECT
MAX(1=0; DROP TABLE dbo.AuditLog; UPDATE Metadata.ETL_flows SET
TimestampColumn='Updated'--
) FROM dbo.Currencies);
```

sql

dynamic sql

ETL frameworks can be vulnerable, too.

ID	Source_object	Dest_object	Dependency	TimestampColumn
1	Staging.Currencies	dbo.Currencies	NULL	1=0; DROP TABLE dbo.AuditLog; UPDATE Metadata.ETL_flows SET TimestampColumn='Updated'--
2	Staging.CurrencyRates	dbo.Fx_Rates	1	Updated
3	Staging.Contracts	dbo.Contracts	2	Updated

1. finish the INSERT:

```
INSERT INTO dbo.Currencies  
SELECT * FROM Staging.Currencies  
WHERE 1=0;
```

2. do bad things:

sql

```
UPDATE Metadata.ETL_flows SET TimestampColumn='Updated'-->(SELECT  
MAX(1=0; DROP TABLE dbo.AuditLog; UPDATE Metadata.ETL_flows SET  
TimestampColumn='Updated'--  
) FROM dbo.Currencies);
```

dynamic sql

ETL frameworks can be vulnerable, too.

ID	Source_object	Dest_object	Dependency	TimestampColumn
1	Staging.Currencies	dbo.Currencies	NULL	1=0; DROP TABLE dbo.AuditLog; UPDATE Metadata.ETL_flows SET TimestampColumn='Updated'--
2	Staging.CurrencyRates	dbo.Fx_Rates	1	Updated
3	Staging.Contracts	dbo.Contracts	2	Updated

1. finish the INSERT:
2. do bad things:
3. remove evidence:

sql

```
INSERT INTO dbo.Currencies
SELECT * FROM Staging.Currencies
WHERE 1=0;

DROP TABLE dbo.AuditLog;

UPDATE Metadata.ETL_flows SET TimestampColumn='Updated'-->(SELECT
MAX(1=0; DROP TABLE dbo.AuditLog; UPDATE Metadata.ETL_flows SET
TimestampColumn='Updated'--
) FROM dbo.Currencies);
```

but wait, there's more:

connection string injection

connection string injection

```
powershell  
$username = "daniel"  
$password = "Pa$$w0rd!"  
  
$connectionString = "Server=sql01.strd.co;Database=Prod_DB;User  
Id=$username;Password=$password;"
```

```
connection string  
Server=sql01.strd.co;Database=Prod_DB;User  
Id=daniel;Password=Pa$$w0rd!;
```

connection string injection

powershell

```
$username = "daniel"  
$password = "Pa$$w0rd!;Integrated Security=True"  
  
$connectionString = "Server=sql01.strd.co;Database=Prod_DB;User  
Id=$username;Password=$password;"
```

connection string

```
Server=sql01.strd.co;Database=Prod_DB;User  
Id=daniel;Password=Pa$$w0rd!;Integrated Security=True;
```

'-- mitigations

- Parameterizing inputs
- Manually sanitizing inputs
- Using an ORM
- Using stored procedures
- Restrictive permissions
- Disabling error messages on web sites
- Web application firewalls (WAF)
- Rate-limit your web app or API

mitigations

parameterizing inputs

```
c#  
string query = "SELECT id, firstName, lastName FROM dbo.Users  
WHERE email = @Email";  
  
SqlCommand command = new SqlCommand(query, connection);  
  
command.Parameters.Add(  
    new SqlParameter("@Email", SqlDbType.NVarChar, 255) {  
        Value = email  
    }  
);
```

mitigations

parameterizing dynamic t-sql

```
sql
SET @sql=N'
UPDATE dbo.Users
SET firstName=@first, lastName=@last
WHERE email=@email;'

EXECUTE sys.sp_executesql
@sql,
@params = N'@first nvarchar(100), @last nvarchar(100), @email varchar(255)',
@first = @new_firstname,
@last = @new_lastname,
@email = @email;
```

mitigations

use an ORM

using parameterized SQL
(EF Core 2.0+)

C#

```
var email = "daniel@strd.co";
var users = context.Users
    .FromSqlInterpolated($"SELECT id, firstName, lastName FROM
dbo.Users WHERE email = {email}")
    .ToList();
```

using DbSet.SqlQuery
(EF6+)

C#

```
var email = "daniel@strd.co";
var users = context.Users
    .SqlQuery("SELECT id, firstName, lastName FROM dbo.Users
WHERE email = @p0", email)
    .ToList();
```

mitigations

sanitizing dynamic sql

ID	Source_object	Dest_object	Dependency	TimestampColumn
1	Staging.Currencies	dbo.Currencies	NULL	Updated
2	Staging.CurrencyRates	dbo.Fx_Rates	1	Updated
3	Staging.Contracts	dbo.Contracts	2	Updated

```
sql
SELECT TOP (1) @sql='
    INSERT INTO '+Dest_object+
    ' SELECT * FROM '+Source_object+
    ' WHERE '+QUOTENAME(TimestampColumn)+ '>' +
    ' (SELECT MAX('+QUOTENAME(TimestampColumn)+')) FROM
    '+Dest_object+');'
FROM Metadata.ETL_flows;

EXEC(@sql);
```

```
sql
INSERT INTO dbo.Currencies
SELECT * FROM Staging.Currencies
WHERE [Updated]>(SELECT MAX([Updated]) FROM dbo.Currencies);
```

mitigations

sanitizing dynamic sql

I ❤️ QUOTENAME()

sql

```
SELECT QUOTENAME('hello');
SELECT QUOTENAME('object', '[');
SELECT QUOTENAME('quote', '"');
SELECT QUOTENAME('apostrophe', ''');
```

```
[hello]
[object]
"quote"
'apostrophe'
```

mitigations

sanitizing dynamic sql

- OBJECT_ID() returns the unique id of a table/view/etc.
- OBJECT_NAME() returns the name of an object.
- OBJECT_SCHEMA_NAME returns the name of the schema of an object.
- QUOTENAME quotes (and sanitizes) a string.

sql

```
-- DECLARE @Source_object nvarchar(100)='Staging.Currencies';  
  
SELECT  
    QUOTENAME(OBJECT_SCHEMA_NAME(OBJECT_ID(@Source_object)))+  
    N'.'+  
    QUOTENAME(OBJECT_NAME(OBJECT_ID(@Source_object)));
```

[Staging].[Currencies]

mitigations

sanitizing inputs

powershell

```
$email = "daniel@strd.co'; IF (SUSER_NAME()='sa') WAITFOR DELAY  
'00:00:01'; --"  
  
$email_escaped = $email -replace "'", ""  
  
$sqlQuery = @"  
SELECT id, firstName, lastName  
FROM dbo.Users  
WHERE email='$email_escaped';  
"@
```

sql

```
SELECT id, firstName, lastName  
FROM dbo.Users  
WHERE email='daniel@strd.co''; IF (SUSER_NAME()='sa') WAITFOR  
DELAY '00:00:01'; --';
```

mitigations

using variables with Invoke-Sqlcmd

powershell

```
$email = "daniel@strd.co'; IF (SUSER_NAME()='sa') WAITFOR DELAY  
'00:00:01'; --"  
  
$sqlQuery = @"  
SELECT id, firstName, lastName  
FROM dbo.Users  
WHERE email= $($email_addr);  
"@  
  
Invoke-Sqlcmd `br/>    -Query $sqlQuery `br/>    -Variable "email_addr=$email"
```

sql

```
SELECT id, firstName, lastName  
FROM dbo.Users  
WHERE email='daniel@strd.co'; IF (SUSER_NAME()='sa') WAITFOR  
DELAY '00:00:01'; --';
```

mitigations

using variables with Invoke-Sqlcmd

powershell

```
$email = "daniel@strd.co'; IF (SUSER_NAME()='sa') WAITFOR DELAY  
'00:00:01'; --"  
  
$sqlQuery = @"  
SELECT id, firstName, lastName  
FROM dbo.Users  
WHERE email= $($email_addr);  
"@  
  
Invoke-Sqlcmd `br/>    -Query $sqlQuery `br/>    -Variable "email_addr=$email"
```

sql

```
SELECT id, firstName, lastName  
FROM dbo.Users  
WHERE email='daniel@strd.co'; IF (SUSER_NAME()='sa') WAITFOR  
DELAY '00:00:01'; --';
```

mitigations

parameterizing inputs in dbatools

powershell

```
$email = "daniel@strd.co'; IF (SUSER_NAME()='sa') WAITFOR DELAY  
'00:00:01'; --"  
  
$params = @{  
    email_addr = $email  
}  
  
$sqlQuery = @"  
SELECT id, firstName, lastName  
FROM dbo.Users  
WHERE email=@email_addr;  
"@  
  
Invoke-DbaQuery `  
    ...  
    -Query $sqlQuery `  
    -SqlParameters $params
```

mitigations

sanitizing unquoted inputs

```
powershell  
$id = "123; DROP TABLE dbo.Students--"  
$id_typed = [int]$id  
$sqlQuery = @"  
SELECT id, firstName, lastName  
FROM dbo.Users  
WHERE id=$id_typed;  
"@
```

```
InvalidArgumentException: Cannot convert value "123; DROP TABLE  
dbo.Students--" to type "System.Int32". Error: "The input string  
'123; DROP TABLE dbo.Students--' was not in a correct format."
```

mitigations

sanitizing inputs

- There are theorized highly advanced exploits, where you could use specially crafted unicode strings with multi-byte characters.
- This is the only realistic option for languages where no parameterization can be done, like PowerShell.

mitigations

stored procedures with
restrictive permissions

- Only grant the application account EXECUTE permissions on stored procedures
- Do not grant SELECT, UPDATE, INSERT or DELETE

 This is not a sufficient mitigation on its own, but a good defense-in-depth strategy when combined with other mitigations.

mitigations

stored procedures with
restrictive permissions

- If you're brave enough, actually denying access to the system DMVs would prevent enumeration of tables, views, etc, but this could affect your application.

 This is not a sufficient mitigation on its own, but a good defense-in-depth strategy when combined with other mitigations.

sql

```
DENY SELECT ON SCHEMA::sys TO [databaseUser];
DENY SELECT ON SCHEMA::INFORMATION_SCHEMA TO [databaseUser];
```

mitigations

disabling web server error messages

- Not showing error messages on your web page makes it much harder for attackers to use error-based injections

 This is not a sufficient mitigation on its own, but a good defense-in-depth strategy when combined with other mitigations.

mitigations

web application firewalls

- A web application firewall (WAF) can detect sql injection patterns and block the client from running repetitive exploratory queries.

This is not a sufficient mitigation on its own, but a good defense-in-depth strategy when combined with other mitigations.

mitigations

rate limiting

- Timing-based attacks require *a lot* of http calls. Rate limiting your site may mitigate timing-based attacks, but is not a fully secure solution on its own.

 This is not a sufficient mitigation on its own, but a good defense-in-depth strategy when combined with other mitigations.

mitigations

sanitize connection strings

- Quote strings with apostrophes or double quotes
- Escape apostrophes/quotes accordingly

Not a very common vector, but relatively easy to mitigate.

```
Server=sql01.strd.co;Database=Prod_DB;User  
Id=daniel;Password=Pa$$w0rd!;Integrated Security=True;
```

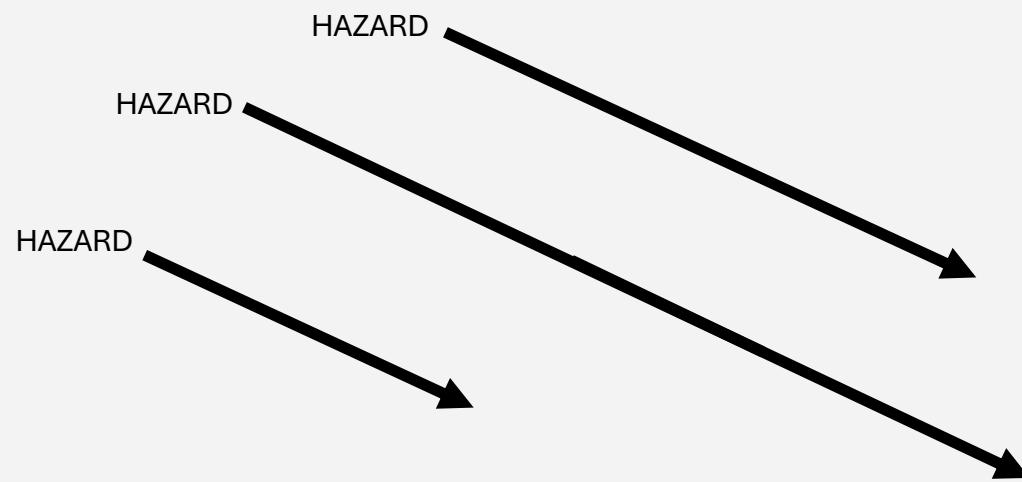

```
Server="sql01.strd.co";Database="Prod_DB";User  
Id="daniel";Password="Pa$$w0rd!;Integrated Security=True";
```

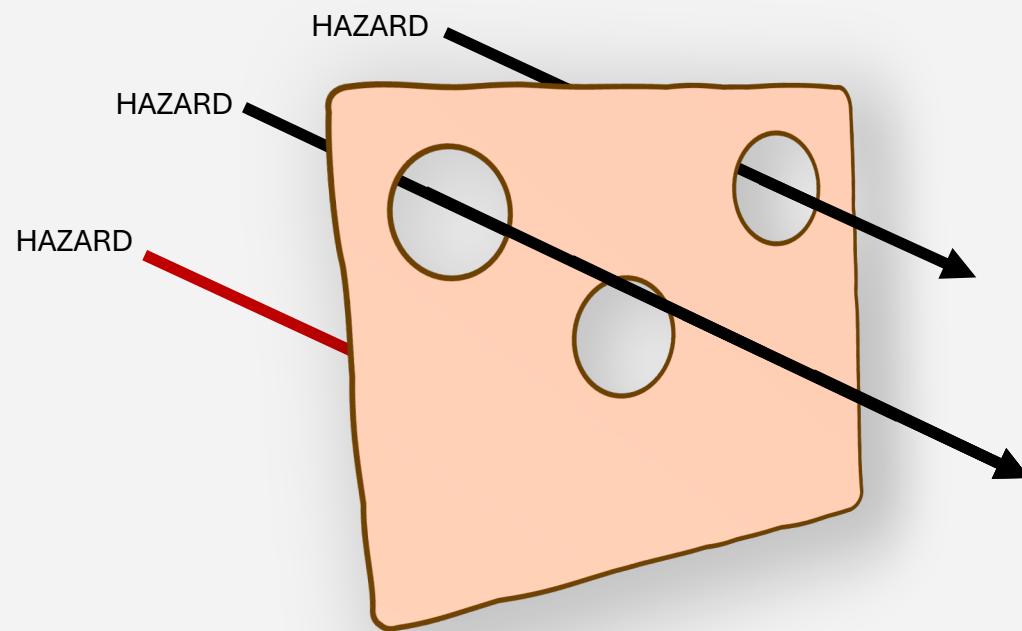

connection string

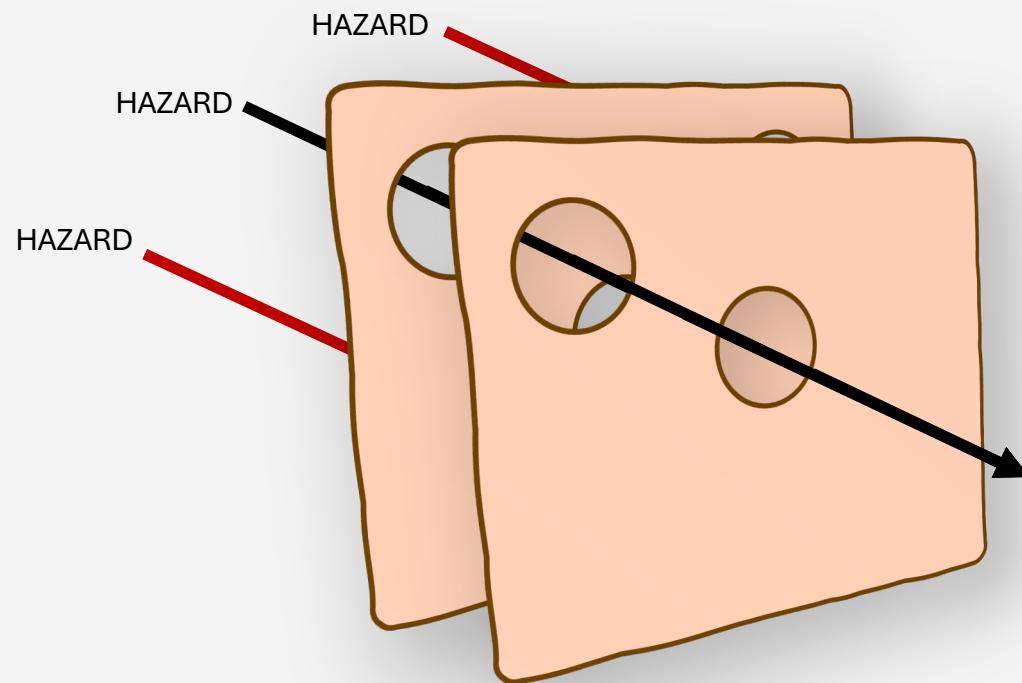

the "swiss cheese model"

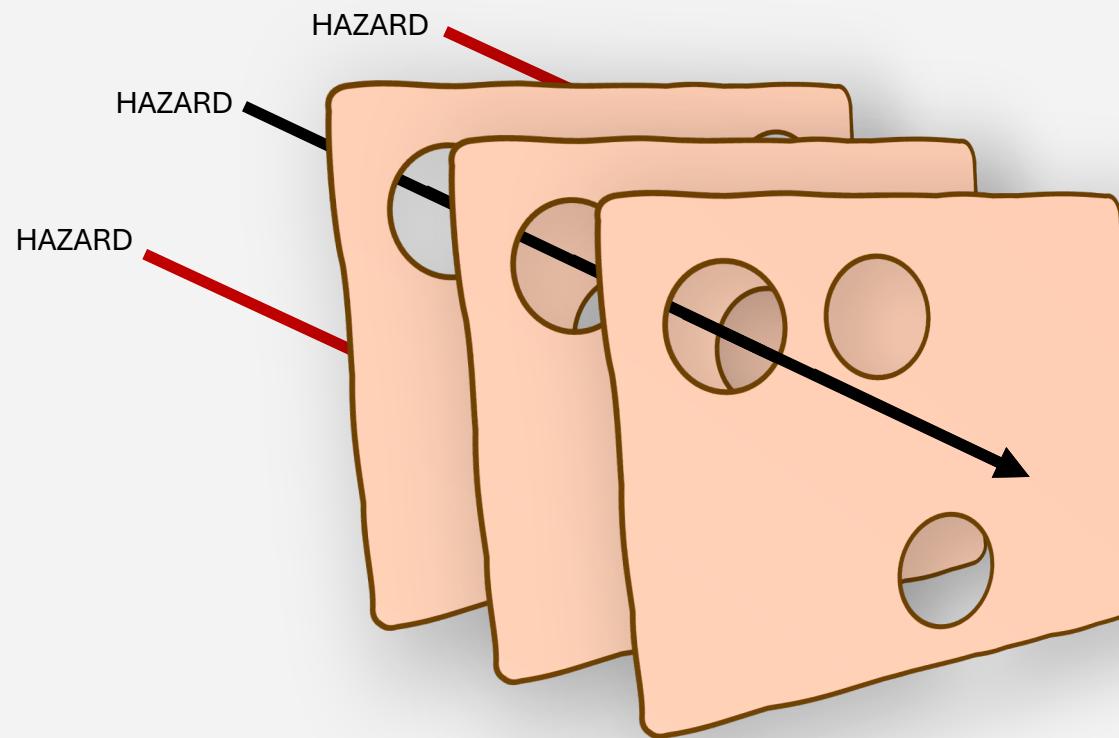

the "swiss cheese model"

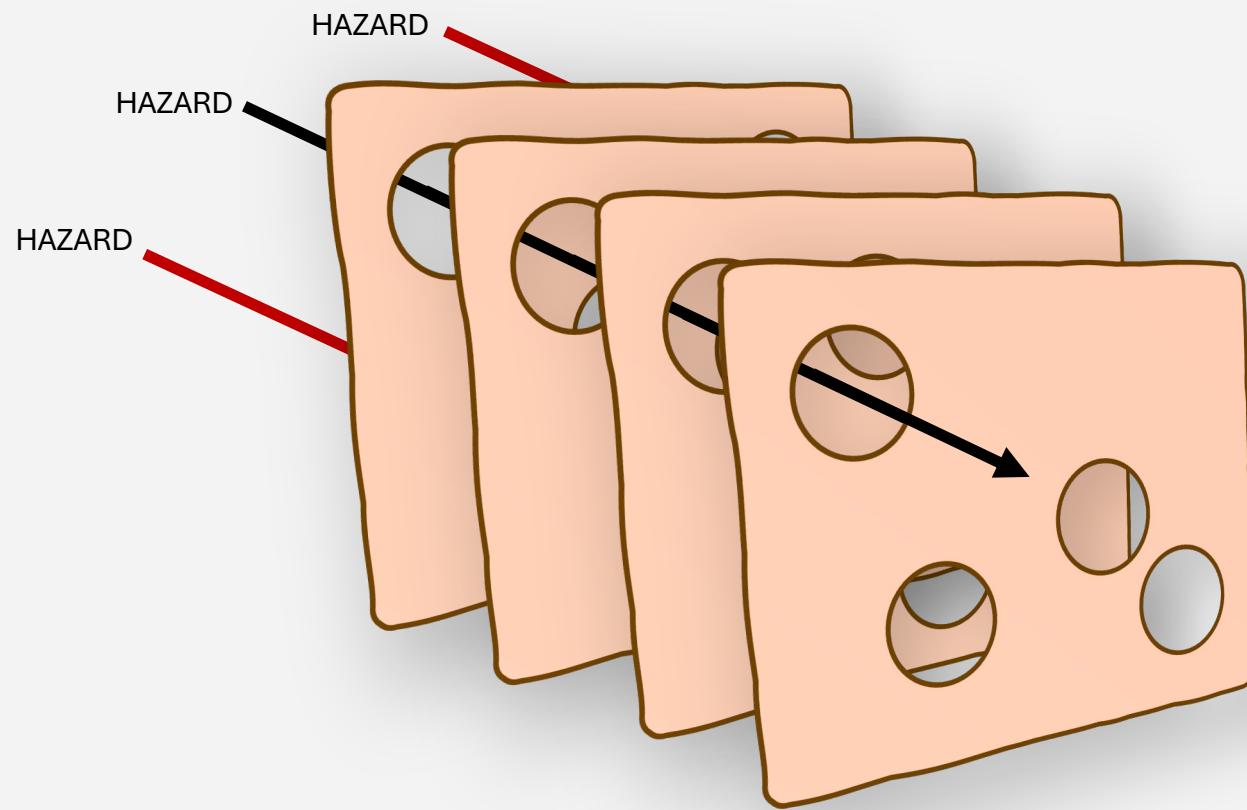

the "swiss cheese model"

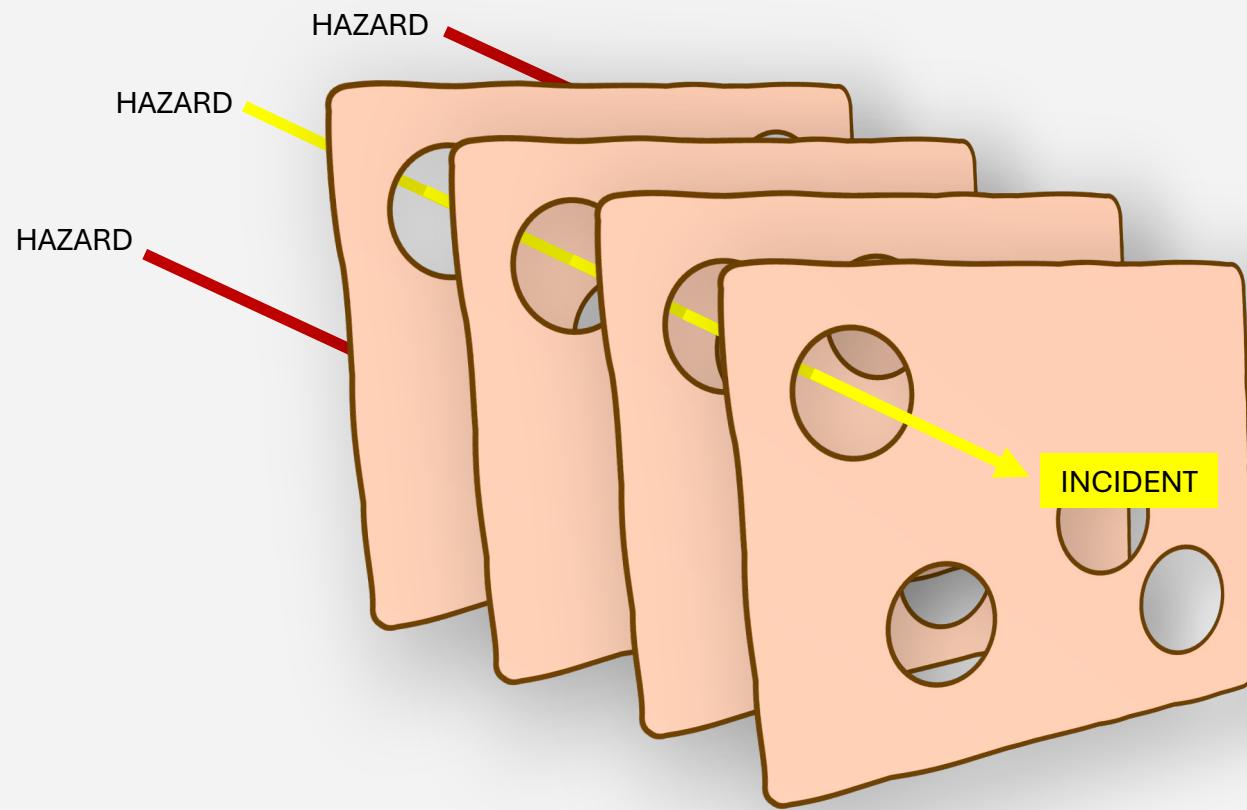

the "swiss cheese model"

the "swiss cheese model"

the "swiss cheese model"

mitigations
